

With over 12M users and valued at \$4B, ClickUp helps teams at companies like Netflix, Spotify, and IBM manage everything from product development to marketing to sales. Recent updates include the introduction of [Chat](#), [Whiteboards 3.0](#), [AI Knowledge Management](#) and more coming in early 2025 -- all in service of our goal of letting people do all their work in ClickUp, making them more productive and giving back at least 20% of their time to dedicate to other things. "One app to replace them all."

Key Product Capabilities:

Project Management	Product Development	Knowledge Management
Tasks	Sprints	Docs
Portfolios	Sprint Reports	Wikis
Board views	Kanban	Ask AI
Gantt charts	Roadmap & Backlog	Connected search
Resource Management	Collaboration	Workflows
Time tracking	Docs	Automations
Workload views	Whiteboards	Forms
Goals	Chat	Custom fields
Dashboards	Inbox	Custom statuses

The Latest:

- [ClickUp Chat](#), ("the Slack killer") — Now, you can do your work right when (and where) you're discussing it. We've totally converged chat with project management, to provide unparalleled productivity.
 - Projects in Chat: Our Chats aren't just for conversation—they also have Lists, Projects, Tasks, Docs, Forms, Whiteboards, and more.
 - FollowUps™: Conversations commonly get flooded with noise, and important messages get lost. Triage messages and ensure action items never get lost with FollowUps.
 - Convert messages into tasks (with AI): Turn any conversation into a task. You can do this yourself, or let AI capture the context from the thread and package it perfectly for execution.
 - SyncUps: Communicate through live video and audio calls, right inside your Workspace. You can share your screen, link to tasks inside the SyncUps chat, assign comments on the call, and more. Plus, AI can automatically post a summary and create action items from the call.
 - [More on the blog here!](#)

- [ClickUp Connected Knowledge Management](#): Empower your team with robust knowledge management tools to document, share, and instantly answer any question using AI.
 - All of a company's knowledge sources (inside of ClickUp and externally from other apps) are connected.
 - Users can use in-document commenting and video Clips to share ideas, respond to each comment thread from a unified Inbox, and turn actions into tasks that can be tracked across teams.
 - They can ask ClickUp's AI any question, and like a personal knowledge navigator, it will provide precise answers instantly from wikis, Docs, Clips, tasks, and comments, taking them directly to the source of the information.
 - They can also connect your company knowledge tools like Confluence, Notion, Google Drive, Dropbox, Github, Figma, Box, Salesforce, and more.
 - And, to ensure that these AI-powered searches are effective (and don't just grab random notes a team member took), wikis are ranked higher in search results, providing teams with the most accurate resources.

- ClickUp AI:
 - ClickUp AI delivers more than 100 fully-templated prompts that are tailored to you. These role-based AI Tools were uniquely developed in partnership with workplace experts across industries and are easy to utilize for virtually any high-value use case.
 - We're adding new prompts every single week, and our research team continuously optimizes and tests our prompts to ensure they're providing you with the highest quality output.
 - Here are just a few of the many ways teams can harness the power of ClickUp AI for some of the top use cases:
 - Marketing: Write a case study, generate a creative brief, and ideate potential solutions.
 - Sales: Create a territory plan, write a prospecting email, and craft an elevator pitch or demo script.
 - Product: Write product requirement documentation, design a user testing study, and identify success metrics.
 - Engineering: Create a sprint retrospective report, generate model schema, and write technical specifications.
 - Project Management: Create a statement of work, spin up a project timeline, and organize tasks.
